Field: Information Technology

## WORK EXPERIENCE

Total Years of Experience: 1 year, 5 months

**PHP Programmer at TechoStudios** September  
Pakistan – Rawalpindi

March 2018 – Present

I am a skilled web programmer with success in developing custom websites for clients. I am working as a backend programmer using PHP, Bootstrap, JavaScript and MySQL. Major role of mine is to create classes and reusable function. As a part of team I have successfully done some projects.

Some of the projects are listed below;

- **e-Sabzi Mandi**

(An online fruits and vegetables store. An e-commerce website which allows user to create their own account and can also order their daily vegetables and fruits from home on a single click. This system also has admin panel which has all of the order management to content management capability)

- **Amazon Giveaway Feeds**

(Scrap Amazon's giveaway feeds and display them on a website as per client requirements. My role in this project was to create a scrapper and functions to successfully scrap data and insert, and display them on client website. The scrapper is able to run after some time interval automatically and has ability to skip already scrapped data.)

- **Know Your Company**

(A platform for company managers where they can avail services to evaluate his team/employees through an evaluation procedure. The manager creates account on website add his team and he can share questions asked by website admin for evaluation process with his team via email. The team members then answer these

questions via email which goes to admin and he evaluates employees on the basis of their answers and let their manager know about his team member status)

- **Star Properties**

(A website that is about to manage different properties posted by registered user. User can create account and post their properties they want to sold or put on rent. People can search and view properties and can contact to property owner)

- **Office Management System**

(This system is about managing office work flow. Main modules of this system are managing employees, managing incomes, managing expenses, managing projects, reports, invoicing etc.)

- **Guru Writes**

(This project was about providing online writing services to clients. Customer on order now page calculate the price on basis of different criteria added by him and place and order. This project has further portals like "Super Admin", "Regular Admin", "Support Portal", "Sales Portal" and "Writers Portal" having their own roles and responsibilities.)

- **Online Repair Booking**

(In this project as according to client's requirements a system was developed to provides facility to end user to book an appointment for their device repair through a booking interface. Client can select suitable timeslot for the appointment for a mobile repair services or he can select a store nearby to his location suggested by the system. This system has inventory management for stores and separate access level to different users like "admin", "store admin", "technicians" and the clients.)

My role in above mentioned projects was as a backend programmer to design database, create classes, scrapping data and writing reusable functions. Also worked on frontend elements in some projects
